

RAZETH's

Live event worldwide stream delivery service

WHY THIS SERVICE?

RAZETH is a systems administrator in Chicago with years of experience in IT, stream delivery, and event production. Often he works with similarly-skilled people to assist and ensure the stream is delivered in the best way possible. This platform is setup across the globe, backed by thousands of servers under a provider trusted by companies like Netflix and Hulu to deliver shows, using the same platform. IndyFurCon was a recent customer, imparting the whole provided package, allowing us to deliver a tv-show style event and 35+ hours of streamed content for the viewers across the world, and without a single issue. There were 1,040 attendees from all over the world that watched, There was also 1,356 hits on the VRChat world, that had the steam displayed in as well. 1.857 TB of data was streamed for the event.

OPTIONS

- **Global livestream delivery**
- **Panelist RTMP input relay**
- **Livestream switching, graphics, av delivery**
- **Stream page design, operation, and webhosting**

PROS

- Fully managed
- Totally customizable
- Works with your current setup
- Extremely easy to implement
- Complete control
- Extremely flexible
- Direct, instant live support
- Ultra-low latency
- Any quality
- Any viewcount
- Embeddable anywhere
- Know who you're working with
- No sudden DMCA takedowns live
- Hosted by furries!

CONS

- Not free, but not expensive
- Requires a website to view, but we can provide one
- Requires a few days of planning if choosing "host it" or "stream it" platform

PACKAGE OPTIONS:

Deliver it-

We provide an RTMP input, and ultra high speed, globally accessible HLS m3u8 output. You handle the rest.

Host it-

We provide a webserver with a fully customized website, that you can attach to your domain or subdomain to access, that can show the stream, it's schedule, some notes, charity information, an optional live chat, and anything else you may want. This also includes the "Deliver it" package.

Stream it-

We provide everything in the "Host it" package, but also stream the event too. This includes displaying the panelists, DJs, graphics, provide audio and lower thirds, everything you could expect from an AV crew for a live event. We work with the panelists in coordinating a good stream and connection, to make everything run smoothly. You can see an example of our work [here](#), [here](#), or [here](#).
